

Bipolar Disorder and the Spoon Theory

by NEWLIFEOUTLOOK TEAM

Understanding the Spoon Theory

When people can't see something, they can't believe it — this is human nature. For countless chronic illness sufferers, it is also an everyday battle.

Most people living with bipolar disorder can say they have been doubted or have had to explain their condition to others. It can be difficult, but using the spoon theory can make the process a lot easier.

The theory was born when lupus sufferer Christine Miserandino was trying to explain what it feels like to have lupus to her friend. Since then, it has spread and been used widely by people with chronic illness, who refer to themselves as "Spoonies."

Read on to learn more about the theory and join in on the discussion!

what is Spoon Theory?

The **Spoon Theory** was created as a way for people with chronic illness to explain their experience to others.

Despite this, there is still a lack of understanding towards sufferers.

HOW IT WORKS

When you have a chronic illness, you have a **limited number of spoons** for each day — and each task you complete costs a certain number of spoons.

Once your spoons are gone, they're gone.

Say you have **10 tasks** to accomplish in a day — like showering, getting dressed, going to work, etc. — and only **10 spoons** for that day.

Some tasks may require more than one spoon, so some things won't get done. You could dip into your spoons for the next day, but then you'll have even fewer spoons tomorrow.

The difference in being sick and being healthy is having to make choices... the rest of the world doesn't have to.²
